Details

The OG Glossary is Back

The Solana Glossary accompanied us devs for years — a real reference that actually helped you understand what was going on, especially on the early days of this, at the time, alien ecosystem. Then it got quietly replaced by a generic "Terminology" page. Flat. Boring. Forgettable. No glow to the ssary.

We're bringing it back. Expanded to 1000+ terms, structured as an SDK, ready for the new scale of consumer-app Solana and the agentic economy.

Overview

We've built the data layer: **1000+ terms**, cross-referenced, categorized, with i18n support (pt-BR + es). It's packaged as an npm package (hopefully released after your contribution) and available at:

Repository: github.com/solanabr/solana-glossary

Now we need **you** to build something cool on top of it. And useful.

Some ideas to get you started (but don't let us limit you):

- A frontend for the glossary: searchable, browsable, beautiful. Something we can actually host and point people to - and it's actually fun.

- Agentic tooling: MCP servers, RAG pipelines, Claude/GPT tools that use the glossary as context - cutting token and context.

- Data expansion: automate adding more terms, keep definitions fresh, pull from Solana docs/repos/blogs.

- Developer integrations: VS Code extensions, CLI tools, Anchor template generators with inline glossary context.

- Educational tools: interactive quizzes, learning paths, onboarding flows for new Solana devs.

The bar: it has to look great and work great. Otherwise you could just go read the boring Terminology page.

Be creative. Surprise us. Turn a boring list of terms into something useful for all kinds of Solana devs & aspiring builders.

Rewards

- 🥇 **1st** $1,500 USDG
- 🥈 **2nd** $1,000 USDG
- 🥉 **3rd** $800 USDG

Total Prize Pool: $3,300 USDG

Rankings are based on total contribution value across all submitted PRs — quality, creativity, and usefulness all factor in.

Judging Criteria

- **Usefulness & Impact [30%]:** Does it solve a real problem? Would Solana devs actually use this?
- **Quality & Polish [25%]:** Does it work well? Clean code, good UX, no rough edges
- **Creativity [25%]:** Novel approach, surprising use of the data, something we didn't expect
- **SDK Integration [10%]:** Proper use of the `@stbr/solana-glossary` SDK or data layer
- **Documentation [10%]:** Clear README, setup instructions, demo (video or screenshots)

Bonus factors (can elevate your ranking):

- Multiple high-quality submissions across different categories

- i18n support (pt-BR, es) in your project

- Live deployed demo

- Deep dive writeup or video walkthrough of your implementation

Rules

✅ **Allowed**

- AI-assisted development (must be reviewed, tested, and production-quality)

- Multiple submissions (separate PRs for distinct contributions)

- Teams submitting under a single account

- Building on any framework/language as long as it uses the glossary SDK or data

❌ **Not Allowed**

- Submissions that don't use `@stbr/solana-glossary` or its data `data/terms/*.json`)

- Low-effort wrappers with no real value added

- Breaking or modifying the core glossary data without a PR to the glossary repo itself

- Closed-source submissions

Submission Requirements

Submit through Superteam Earn with:

- **PR Link(s)** — One PR per distinct contribution to github.com/solanabr/solana-glossary

- PR should include setup instructions and/or a short demo (video or screenshots)

- **Twitter Post** — Share your submission and tag @SuperteamBR and @SuperteamEarn

- **Brief Summary** — 3-5 sentences explaining your approach and what makes it useful

- **Star the repo!** It's rude not to.

Your final ranking will be the sum of all your contributions.

Check the README for the full API reference.

Timeline

- **Submission Deadline**: 7 days from listing

- **Review Period**: 7 days after deadline

- **Winner Announcement**: Within 10 days after deadline

Terms & Conditions

- All submissions must be original work

- Code must be open-source (MIT license preferred)

- Winning submissions may be featured and extended by Superteam Brazil

- By submitting, you agree to potential follow-up collaboration

- Judges' decisions are final

Questions?

- **GitHub**: Open an issue on the repo, tag @kauenet

- **Discord**: discord.gg/superteambrasil

- **Twitter**: https://twitter.com/SuperteamBR / https://twitter.com/kauenet

Skills: TypeScript, Frontend/Backend, AI/LLM tooling, Data Engineering, UX Design

Eligibility: Brazil
